ETFX DAXglobal Steel Fund

Investment Objective

ETFX DAXglobal Steel Fund is designed to track the performance of the DAXglobal® Steel Index.

About Exchange Traded Funds (ETFs)

ETFs combine the advantages of stocks (tradability and liquidity) and index funds into one product. With ETFs it is possible to achieve exposure to an Index in one simple transaction in the same way as trading any security listed on the stock exchange. ETFs can be created or redeemed on demand (by market-makers).

About the Index

The DAXglobal Steel index tracks the largest companies in the steel sector that generate at least 50 percent of their business from metal ore mines or steel production. The selection criteria for the DAXglobal Gold Miners index are market capitalization and the liquidity (average daily exchange turnover) for the last three months. The market capitalization of the index members must be at least USD 500 million, the average daily exchange turnover USD 2 million and the composite equities are given a maximum weighting of 15 percent.

About ETF Exchange (ETFX)

ETF Exchange is the world's first 3rd Generation ETF Platform offering investors access to low cost swap backed ETFs with credit diversification across a number of participants rather than reliance on a single bank. As the banks, APs and market makers compete for business, true liquidity and competition is created.

Third generation ETFs meet investor demands for increased levels of transparency, liquidity and counterparty risk management. Third Generation ETFs provide diversified index replication across a consortium of the strongest financial players and concentrate liquidity within a single platform.

ETF Securities pioneered the development of ETCs, with the world's first listing of an ETC, Gold Bullion Securities in Australia and London in 2003 and then the world's first entire ETC platform which was listed on the London Stock Exchange in September 2006. ETF Securities now offers more than 170 ETPs with over \$17 billion in assets as at December 2009. The Exchange Traded Products (ETPs) provide investors with a wide variety of investment strategies, with ETPs offering resource equities, physical, long, forward, leveraged and short exposure to all commodity sectors and now G10 Currencies.
